THE EXAMINER

ISSUE II AUGUST 2018

Welcome to the second edition of The Examiner. A monthly wrap on the latest news in health, industry and community from Wollongong Diagnostics.

Over \$6 million raised to help combat homelessness

In June, Principle Radiologist, Arunima Gupta hit the streets as part of the annual St Vinnies CEO Sleepout to raise money for St Vincent de Paul Society and support Australians in need.

Typically, it was one of the coldest nights of the year, but that didn't deter Aru and the several other Illawarra Business leaders who experienced the harsh conditions the homeless are faced with every night.

Aru was one of the leading fundraisers within Wollongong raising a staggering \$11,259 to help support the efforts of the St Vincent de Paul Society to put an end to homelessness in Australia.

Thank you, Aru!!

Meet the Team

Mikhaela McKeown: Administration Assistant

Five-and-a-half years ago I moved from Melbourne to Wollongong and started working at Wollongong Diagnostics as a Receptionist and soon after I moved into an Administrative role. Outside of work I enjoy keeping fit, cooking and of course going on holidays! I love spending time with my Husband, Family and two very cute Labradors. I barrack for the Sydney Swans and enjoy going to a few home games per year.

My favourite thing about working at Wollongong Diagnostics is working within a close team environment and a family-owned business. The Doctors are always approachable and easy to get along with. I enjoy the various different aspects of my job and am always driven to succeed by constantly learning new things. Wollongong Diagnostics is continuously growing which makes working here exciting.

If I could do anything in the world I would choose to work for NASA.

Case of the month

Study breast

A 48 year old patient presented with a palpable lump in the left breast and skin irritation. A 3D tomographic mammogram and breast ultrasound were performed at our Women's Imaging Suite in Corrimal, showing a suspicious irregular density, with internal microcalcification also seen on mammogram. An ultrasound guided biopsy was performed, which lead to a diagnosis of Invasive Ductal Carcinoma (ICD).

IDC is where abnormal cancer cells have originated from the milk ducts in the breast and have invaded the surrounding breast tissue. According to the National Breast Cancer Foundation, it is the most common type of breast cancer, with 70-80% of all breast cancer diagnoses being IDC.

Illawarra Women in Business Luncheon

In the month of July we sponsored an Illawarra Women in Business event which was not only a chance to recognize the work of several women in the Illawarra, it was also a chance to tell the unique story of where, how and what drives Wollongong Diagnostics.

Principal Radiologist, Arunima was joined on stage by guest speakers Nicki Bowman and Kylie Moffitt.

Nicki has worked and travelled the globe and she shared her insights and leadership framework in her keynote titled "The Emotional Hardhat Leader".

Kylie Moffitt is CanConquer - Exercise Beyond Cancer's founder and is dual qualified as Principal Physiotherapist/Senior Accredited Exercise Physiologist. Kylie is certified as a PINC Women's & STEEL Men's Cancer Physiotherapist and accredited with exercise oncology as an Exercise Physiologist
